1. Did your estimations reflect the actual effort?

Yes. The story points reasonably represented the complexity of the tasks, and all planned work was completed successfully.

2. Was your backlog well-prioritized?

Yes. The user stories were logically grouped under relevant epics and distributed across three sprints in a structured order.

3. How did your simulated sprint align with your plan?

The sprints followed the planned workflow, with tasks moving from **To Do** → **In Progress** → **Done**, and all planned items were completed.

4. What insights did the burndown chart give about your team's capacity?

The burndown charts showed the remaining story points reducing to zero, indicating that the planned sprint workload was successfully completed.
